Terminal SERVER

For those employees who
don't have their own office
PCs, a personal desktop
environment can be
provided when using a
terminal server. These
employees can access their
own "virtual PCs" from
anywhere in the world.

Those employees who do not have their an office PCs can still use the USB device or Thin Client laptop when connected to a Terminal

Server.

Still using hard disks?

THINREBORN protects your company against the risk of data leakage. Without a hard disk there is no risk for data leakage. In addition, without a hard Disk, there is no chance for your PC to be infected by any computer viruses.

THINREBORN is cost-effective. To use THINREBORN only an update to the client module is needed, saving on installation time and maintenance. Using THINREBORN will enable you to use your current PC in the existing server layout Without any network changes.

Remove the hard disk

Load the module

THINREBORN as Thin client terminal
